

DO NOTHING & EARN MORE

Most people don't even dream of farming without tilling, fertilizers, pesticides and weeding but since 1960 till date for Late Mr. Bhashkar Save's 'Kalpvruksk Farm', that is the natural way. He has not ploughed his farm, nor used any agrochemicals and still reaps a record harvest.

Mr. Save' who owns 15 acres of land used to do cultivation with '**Modern Method of Farming**' (MMF). In the year 1957, Mr. Save' faced heavy losses due to MMF. Within 3 years, he realized all the drawbacks of MMF. He found that 'There is nothing wrong with the land, but the problem of losses was with the system of MMF'. His profitability dwindled considerably due to the use of MMF material; also, the land started losing its porosity and fertility. He realized (in 1960) the natural cycles and philosophy of 'Live & Let Live'. By observing the growth of forests, where trees & bushes roots grow thick and long without any help from anybody in the form of tilling, manure, watering, crop protection and weeding. Bhagavan – GOD - Nature only takes care of its own creation as long as it is not disturbed.

In 1960, for the '**First Time in the World**' with the help of the natural cycles Mr. Save' undertook one experiment, in that, his farm production and income reduced to 50% but surprising profit went up !! How?

By the MMF production his income was Rs.100/- and all the expenditure was Rs.80/-, only some time his net profit was Rs. 20/-. Where in new experiments, income was Rs. 50/- and except irrigation Mr. Save' has not done anything, that is why expenditure was only Rs.10/-, so he got net profit of Rs.40/- and he harvested toxic free production. By this result any uneducated person can realize that he wants 'Quantity or Quality' simultaneously 'Profit or Production'. So after MMF illusion was exposed; he did many other experiments and research to get higher production than MMF.

Mr. Save' success comes from years of patiently observing Nature and then he experimented and implemented his own techniques in farming. Mr. Save' achieved commendable success by adopting '**Organic Farming Systems**' (OFS). By Mr. Save' system we get nutritious produces which can cure any disease, we get pollution free environment, we get high yields and good profit at very low expenses, with less water, labour and without any 'Technology'. For right education Mr. Save' used to say '**My School, College & University is my farm**', where by actual practices I have learnt that in organic farming '**Only by Little Irrigation and by Doing Nothing we can Earn**'. Mr. Save' was a small farmer and not educated much, even then he has not kept any secret about his system and enthusiastically explains them in detail. First Mr. Save' started practicing with '**Organic Farming**' and after success he switched over to '**Natural Farming**'. Mr. Save' discovered that any farming has only five basic principles and nature helps us in all. These five basic farming principals are as under.

1. Tilling: The armies of insects and earthworms tunnelling action they till the soil efficiently, in fact, they are better than tractors because tractors eat oil and disturb the soil. After fast initial soil tilling, other all tilling is done by earthworms and insects. Earthworms dig deep holes in the farm land and

come out for excreta and these excreta contain Manganese, Nitrogen etc.... which are required for the growth of the plants. Through the holes air passes and in rainy season water easily percolates in the soil, which helps to increase ground water level.

2. Manure: For the plant, manure is given by 'Buff System'. As a manure dead leaves, cow dung, organic waste and houses green waste has been used. The farmer's best friend's earthworms convert this organic waste into manure. When nature provides earthworms and manure free of cost, why should we show our foolishness by purchasing chemical & fertilizers?

3. Water: By 'Trunk Watering System' near the tree farmers are over using water in which roots gets suffocates and become very weak. In 'The Platform and Trench Irrigation System' and with 'Croton Indicator Plant', water is given from 12 to 15 feet away from the trees. In this system water requirement gets reduced to 80% and without any expenses & efforts ground water gets increases.

4. Crop Protection: By using poisonous pesticides we are interfering in nature cycles and we are committing a sin. In fact, all the 'Holy Books' says that 'We all are soldiers and not the owners of the earth; our main duty is to protect the earth so 'Live & Let Live'. For crop protection we should uses natural biological pest, to control insects use Neern, Curry Patta, Tulsi and Cow Urine solution. To control insects natural help us in a day by Red Ants, Spiders Frogs any many more eat insects more than their weight also bird like owls hunt rats and many birds play their duty.

5. Weeds and Grass: Farmers think that weeds and grass is nuisance and they are enemy of crop, in fact they are nature's blessing. Weeds and grass has a unique ability to convert atmospheric in cool, they fixe nitrogen, vital nutrients which benefits other plants, beside that they 'Clothe' the mother earth, support in growth of main crop and also they stop water evaporations, so do not uproot weeds and grass, only cut them and feed for animal's food and from animals one should get organic farming material, milk and ox for transport.

Like Gandhiji Mr. Save' use to believing in one world and all the people as his brothers. To encourage people for OFS, he tried his leave best with his individual capacity, but people was not convinced only with philosophy and spiritual talk. Some people get convinced, but refused to take the risk of shifting from MMF to OFS! Why? Because they are 'Hooked' and heavily in debited to money lenders.

Today, due to MMF, grains and fruits are toxic and tasteless. By such toxin food people get sickness, gets many diseases and weakness, so on the strength of medicines people have to live life time. This way, how long one can pull his life?

At the age of 21, myself Ashok Sanghavi am a businessperson living in Mumbai. I had 'Rheumatism' and in the whole world there is no cure for this diseases, so for natural medicines & healthy food, I decided to do farming, but at that time I did not know the ABC of farming.

In the year 1987 as a visitor, I was convinced by Mr. Save's OFS. Therefore, in my 24 acres of barren wasteland of 'Sanghavi Farm' I took Mr. Save's guidance. Just in four months, I got nutritious food, healthy life, all scientific data and high profit from wasteland. I realized the importance of Mr. Save's OFS for the Society that 'By spending money any one can do farming, but under Mr. Save's OFS with very less investment, labour and by only little irrigation one can earn'. In the OFS process, I learnt that 'For the protection of the living environment, the only road to success is Mr. Save's simplest **Jain system of Organic Farming** so it must be addressed to the society. For transfers and imparting Mr. Save's valuable knowledge to prevent the farmers from committing suicide, to give healthy food, disease free healthy life to people and to protect the environment for flora and fauna, I have written my first book to give guidance about, how to get minimum 900% profit and how to cure acute/chronic diseases without any expenditure? About book, please see **Book Info.** of this website.

'Seeing is Believing', so every Saturday we Save' & Sanghavi used to welcome people from National and International Organizations, to join hands in our 'Holy Work' and to help and propagate the ideas of 'The way to quality Life'. For this work Mr. B. H. Save' has received many prestigious National & International Awards (see **Achievements** of this website) and his system was a patentable subject, so for National Security I tried my level best to register, but there is no support, help or appreciation from the Government's side! Why? The reason is the MMF lobby in India as well as abroad, who obstruct the development and spreading awareness of the OFS. We have not succeeded in promoting our OFS, because farmers are not learned and Mr. Save use to say in a philosophical way about his system, also initial success of MMF system has left an impression in the minds of the farming community.

Multinational Companies are very clever, on one side, they have MMF factories and on other side, they have Pharmacy Companies. When with MMF toxic foods people get diseases and do not get essential elements for the body, they provide medicines and nutritious-tinned food. In short, to get higher production farmers have used MMF and for more production of animals and hens, scientists have developed 'Jersey - Cow' and 'English Hen - Egg'. Simultaneously 'Mad -Cow', 'Bird - Flu', 'Cancer' and many other diseases have also developed!!

Now with all 'Modern Culture - Agriculture & Science', our body's immunity to survive against diseases is reducing. Modern Medication is becoming more expensive, which is not affordable to the poor people. Besides, this system does not help in the natural activities of the body. The main reason for all this is the inappropriate food, irresponsibility of people towards the living environment and unnatural lifestyles etc.

Today, the expenditure is more than the income, so to fulfil the family's requirements, people and farmers take loans from Bank. Just to get rid of all the debts they work like donkeys and get sick. Then for healthy life, they sacrifice their body parts, spend all their wealth on modern medicines and doctors, and at last do not achieve anything. From this, what lesson have we learned? The simple answer is '**RETURN BACK TO NATURE**'.

'Food, Clothing and Shelter' are the most important necessities of life. Suppose one does not have cloth and shelter, then also one can survive, but without food or with toxic food, how many days one can survive? This is the reason that one should do organic farming or demand only organic farming production for the healthy life. In entire World, there is no college where one is taught about **ZERO input of Jain Organic Farming or a system that can protect our Environment or can teach us about Natural Healing**. That is the main reason; force fully people have to adopt Modern Medicine and Modern Farming.

In such devious circumstances, Mr. Save's family, Mr. Ashok Sanghavi & Mr. Bharat Mansata advice only one thing, 'Like us **'DO NOTHING & EARN MORE'**. By adopting 'Mr. Save's System of Organic Farming' or demanding 'Organic Farming Production', you will get disease-free health, good wealth, happiness & peace'. For awareness, we have stard **'Natural Farming Learning Centre'** at **'Kalpvruksh Farm'**. With actual practice, we show all the OFS scientific data, with Zero input we show how to get good profit and healthy production, we also show how to cure acute/chronic diseases by eating Organic Farming Production. Please take advantage of this learning and save useful water, protect environment and by awareness help other farmers from committing suicide. If you want to learn about Mr. Save's System of Organic Farming, please registered your name by sending **Training Classes** form of this website.

You have read about Mr. Save's system of organic farming. Now Ashok Sanghavi (I) have done many researches on myself and found natural cure medicine, about that please see and ready **Organic Medicines** of this website.

Do only little irrigation and 'DO NOTHING' because free of cost Nature does all other works.
