

DO NOTHING & EARN MORE

Most of the people don't even dream of farming without tilling, fertilizers, pesticides and weeding but since 1960 till today for Late Mr. Bhaskar Save' of 'Kalpvruksk Farm', that is the natural way. He has not ploughed his farm, nor used any agrochemicals and still reaps a record harvest.

Mr. Save' who own is 15 acres land and use to do cultivation with 'Modern Method of Farming' (MMF). In the year 1957, Mr. Save' faced heavy losses due to MMF. Within 3 years, he realized full drawback of MMF. He found that 'There is nothing wrong with the land, but the problem of losses was with the system of MMF'. His profitability has dwindled considerably due to the use of MMF material; also, the land started losing its porosity and fertility. He realized (in 1960) the natural cycles and philosophy to 'Live & Let Live'. By observing the growth of forests, where trees & bushes roots grow thick and long without any help from anybody of tilling, manure, watering, crop protection and weeding. Bhagavan – GOD - Nature only takes care of its own creation so long as it is not disturbed.

In 1960, first time with the help of the natural cycles Mr. Save' undertook one experiment, in that, his farm's production and income reduced to 50% but surprising profit went up! How?

By the MMF production income was Rs.100/- and all the expenditure was Rs.80/-, only some time his net profit was Rs. 20/-. Where in new experiments, income was Rs. 50/- and except irrigation Mr. Save' has not done anything, that is why expenditure was only Rs.10/-, so he got a profit of Rs.40/- and harvested toxic free production. By this result any uneducated person can realize that he wants 'Quantity or Quality' simultaneously 'Profit or Production'. So after MMF illusion was exposed; he has done many other experiments and research to get higher production than MMF.

Mr. Save' experimented and implemented his techniques, he achieved commendable success by adopting 'Organic Farming Systems' (OFS). Mr. Save's system is the panacea, for disease free healthy life through nutritious agricultural produce, pollution free environment and at the same time makes good profits by high yields at very low expenses, no labour and without any 'Technology'. His success comes from years of patiently observing Nature's ways. For the right education he was saying '**My university is my farm**', where by actual practices I learned that in farming '**Do nothing and earn more only by little irrigation**'. Mr. Save' was a small farmer and not educated much, even then he has not kept any secret about his system and enthusiastically explains them in detail. By actual practices of OFS and then he swatch over to 'Natural Farming' and earn more. Mr. Save' discovered that any farming methods has only five basic principal and nature help us in all. These five basic farming principals are as under.

1. Tilling : The armies of insects like earthworms and ants, by their tunnelling action, till the soil efficiently, in fact, they are better than tractors because, tractors eat oil and disturb the soil and environment too. After the initial tilling, earthworms, ants and small insects in the soil do the tilling. Earthworms dig deep holes in the land and come out for excreta. These excreta contain manganese, Nitrogen etc.... which are required for the growth of the plants & trees. Ants built

networks in the soil. Through these holes and networks air passes into the soil and during the rainy season water is easily percolate deep down to the root level through these hole. This will help to increase the level of water in the ground.

2. Manure : By the 'Buffet System' for the soil, only nutrient used in farm is dead leaves, cow dung and organic waste matter from the other houses in the village, The farmers best friends earthworms convert this organic waste into inorganic manure. When nature provides these earthworms and manure free of cost, why should we show our foolishness by purchasing chemical & fertilizers?

3. Water : Most farmers tend to over use water, suffocating the roots and watering near the trunk makes the roots consequently weak. In 'The Platform and Trench System of Irrigation' and 'Croton Indicator Plant', in which irrigation is done 12 to 15 feet away from the trees, thus water requirement get reduced to 80%. This OFS will help to increase the water level in tube wells without any expenses and efforts.

4. Crop Protection : Uses natural biological pest control. For Instance, Neern, Curry Patta, Tulsi and Cow Urine solution are insects' repellents.' Red Ants, Spiders and Frogs would kill; eat more than their weight of insects in a day. Owls hunt rats and many birds play their duty. In fact, all the 'Holy Books' says that 'We all are soldiers and not the owners of the earth and our main duty is to protect the earth, so 'Live & Let Live Others'. By interfering in nature cycles, we are commit sin by using poisonous pesticides. For this interfering of God's natural cycles, one day one has to face the consequences.

5. Weeds and Grass : Farmers think of weeds as nuisance and enemy, in fact they are nature's blessing. Plants roots have the unique ability to convert atmospheric nitrogen into vital nutrients, which benefits other plants too. Beside they 'Clothe' the earth, aiding the growth of soil enhancing bacteria and stop the water evaporations. So do not uproot them, only cut and feed to the animals, to get OFS material, milk and strength for the Ox for transport.

Mr. Save' was a follower of Mr. Gandhiji and like him he believed in one world and treated all people as his brothers. For transfer his OFS, in his individual capacity he tried his level best, but only with philosophy and spiritual talk, people do not get convinced, even than people use to visit Mr. Save's farm and observe the developments; and use to get convinced, but refused to take the risk of shifting from MMF to OFS! Why? Because they are 'Hooked' and heavily in debited to moneylenders.

Today, due to MMF, grains and fruits are toxic and tasteless. Such toxin foods are making people sick, gives many disease, too much weakness and on the strength of medicines people have to live life time. This way, how long can one pull on?

At the age of 21, myself Ashok Sanghavi I am a businessperson living in Mumbai. I had 'Rheumatism' and in the whole world there is no cure for this diseases, so for natural medicines & health food, I decided to do farming, but at that time I did not know the ABC of farming.

As a visitor, I convinced by Mr. Save's OFS. Therefore, in my 24 acres of barren wasteland of 'Sanghavi Farm' I took Mr. Save's guidance in the year 1987. Just in four months, I got nutritious food, healthy life, all scientific data and high profit from wasteland. I realized the importance of Mr. Save's OFS for the Society that 'By spending money any one can do farming, but under Mr. Save's OFS with very less investment, labour and by only little irrigation one can earn'. In the OFS process, I learnt that 'For the protection of the living environment, the only road to success is Mr. Save's simplest Jain system of Organic Farming, so it must be addressed to the society. For transfers and imparting Mr. Save's valuable knowledge to prevent the farmers from committing suicide, to give a healthy food, to give disease free healthy life to people and to protect environment for flora and fauna, I have written my first bock to give guidance about, how to get minimum 900% profit? And how to cure acute/chronic diseases without any expenditure? About book, please see **Book Info.**

'Seeing is Believing', so every Saturday we Save' & Sanghavi use to welcome people from National and International Organization, to join hands in our 'Holy Work' and to help and propagate the ideas of 'The way to quality Life'. For this work Mr. B.H. Save' has received many prestigious National & Inter National Awards (see **Achievements**) and his system was a patentable subject, so for national security I tried my level best to register, but there is no support, help or appreciation from the Governments side! Why? The reason is the MMF lobby in India as well as abroad, who obstruct the development and spreading awareness of the OFS. We are not succeed in progressing our OFS, because farmers are not learned and Mr. Save use to say in philosophical about his system, also initial success of MMF system has left an impression in the minds of the farming community.

Multinational Companies are very clever, on one side, they have MMF factories and on other side, they have Pharmacy Companies. When with MMF toxic foods people get disease and do not get essential elements for the body, they provide medicines and nutrition-tinned food. In short, to get higher production farmers have used MMF and for more production of animals and hens, scientists have developed 'Jercy - Cow' and 'English Hen - Egg'. Simultaneously 'Mad - Cow', 'Bird - Flu', 'Cancer' and many other diseases also developed!

Now with all 'Modern Culture - Agriculture & Science', our body immunity to survive against diseases is reducing. Modern medication is becoming more expensive, which is not affordable to the poor people. Besides, this system does not help in the natural activities of the body. The main reason for all this is the inappropriate food, irresponsibility of people towards the living environment and unnatural lifestyles etc.

Today, the expenditure is more than the income, so to fulfil family requirements, people and farmers take loans from Bank. Just to get rid of all the debts they work like donkeys and get sick. Then for healthy life, they sacrifice their body parts, spend all their wealth on modern medicines and doctors,

and in last do not achieve anything. From this, what lesson we have learned? The simple answer is **'RETURN BACK TO NATURE'**.

'Food, Clothing and Shelter' are the most important necessities of life. Suppose one does not have cloth and shelter, then also one can survive, but without food or with toxic food, how many days one can survive? This is the reason that one should do organic farming or demand only organic farming production for the healthy life. In entry World, there is no collage where one will taught about ZERO input of Jain Organic Farming, which system can Protection our Environment, can teach us about Natural Healing. That is a main reason; forcefully people have to adopt Modern Medicine and Modern Farming.

In such devious circumstances, Mr. Save's family, Mr. Ashok Sanghavi & Mr. Bharat Mansata advice only one thing, 'Like us **'DO NOTHING & EARN MORE'** by adopting only 'Mr. Save's System of Organic Farming' or demand only of 'Organic Farming Production', for your disease-free health, good wealth, happiness & peace'. Therefore, for awareness we have stard 'Natural Farming Learning Centre' at 'Kalpvruksh Farm'. With actual practice, we show all the OFS scientific data, with Zero input we show how to get good profit and healthy production, we also show how to cure acute/chronic diseases. Please take advantage of this learning and save useful water, protect environment and by awareness help other farmers from committing suicide. If you want to learn about Mr. Save's System of Organic Farming, please registered you name by sending **Training Classes** form.

You have ready about Mr. Save's system of organic farming. Now Mr. Ashok Sanghavi has done many researches on himself and found nature cure medicine, about that please ready **Organic Medicines**.

Do only little irrigation and 'DO NOTHING' because free of cost Nature does all other works.
